- 

## Introduction

---

Sierra Chart offers complete solutions for financial market brokers. Our specialty is mainly in the area of the futures markets. However, all markets are supported including crypto currencies, equities and Forex.

We have developed excellent relationships with many brokers and we can work with you as well.

## What We Offer

---

1. World-class charting and trading software. This is a complete trading platform supporting all the features your trading customers need. Supporting numerous data feeds and exchange connectivity options. For what is currently supported, refer to [Supported Data and Trading Services](#) page.
2. If you would like to do your own integration to Sierra Chart's trading and charting functionality, then you can develop a server which follows a simple protocol that Sierra Chart supports. For more information, refer to [DTC Protocol](#). We are able to create a custom listed service in Sierra Chart for your Data or Trading service which follows this protocol.
3. Historical data databasing and serving to Sierra Chart client instances.
4. Centralized order routing where Sierra Chart client instances connect to an order routing server which interfaces to a FIX protocol connection or DTC Protocol connection.
5. Real-time data serving to Sierra Chart client instances from a single market data feed.
6. Provisioning of server hardware.
7. Technical support to your brokers and customers.
8. Continued and high quality development of the Sierra Chart charting and trading software. The development is of the best quality to ensure high reliability. This development helps us stay ahead and helps you retain and gain new customers.
